

AARON HEINER

Computer Science Student | Software Builder & AI Practitioner

Provo, UT | (208) 960-9883 | aaron.heiner.dev@gmail.com | linkedin.com/in/aaron-heiner | github.com/aheiner2001/Practical-Builds

SUMMARY

Computer Science student and software builder with proven experience developing internal SaaS tools, integrating REST/Discord APIs, and writing C# game logic for open-source projects. Skilled in full-stack web development, AI workflow automation, and machine learning, with a distinct focus on delivering practical, scalable solutions for operational needs.

TECHNICAL SKILLS

Languages & Frameworks: Python (Pandas, NumPy, Scikit-learn), C#, Next.js 14, TypeScript, Tailwind CSS, SQL, HTML/CSS, JavaScript

Databases & Tools: Firebase, Supabase, MySQL, REST & Discord APIs, Git/GitHub, Unix/Linux CLI, Docker

AI & Machine Learning: Neural Networks, XGBoost, Regression Models, AI Prompting/Agents, Ollama, Claude Code / MCP

PROJECTS

Sunny Fleet Accountability (SaaS Application) Aug 2026 – Present

- Partnered with management at Sunny (mobile car detailing) to assess operational workflows and build a fleet and inventory SaaS platform.
- Engineered vehicle usage accountability logs, equipment maintenance tracking, and automated inventory restock alerts using Next.js 14, TypeScript, Tailwind CSS, and Firebase.
- Actively maintaining and optimizing system architecture to support multi-vehicle scalability and role-based access controls.

Open Source Contributor — Realm (RTS Game Engine) (GitHub: [speige/Realm](#)) Aug 2026 – Present

- Authored custom map scripts, 3-lane pathfinding logic, and gameplay trigger components in C# for an open-source RTS engine.
- Updated and maintained core game APIs, enhancing script execution efficiency and resolving framework issues.

Team Operations App — Wiggly Wash Springville, UT

- Built and deployed an internal scheduling and job-tracking application for a local car wash, currently in active daily use.
- Iterated closely with non-technical staff to simplify UI flows and refine feature sets based on operational feedback.

ML Regression Neural Network On GitHub

- Engineered cyclical time and weather features during data cleaning, boosting model prediction accuracy by over 50%.
- Tuned hyperparameters including hidden layer dimensions, activation functions, and dropout regularization for optimal generalization.

PROFESSIONAL EXPERIENCE

DegaSolutions LLC — AI Developer (Intern) May 2026 – Present

- Developed web applications and integrated third-party REST and Discord APIs to automate notification pipelines and bot commands.
- Collaborated on AI workflow tooling and automated developer tasks utilizing Claude and Anthropic framework concepts.

FreshPane Solutions LLC — Owner & Business Operator Provo, UT | Mar 2025 – Present

- Founded and operated a residential and commercial window cleaning business generating \$70,000+ in annual revenue.
- Tracked operational metrics (completion rates vs. glass pane counts) to build data-backed pricing models and optimize scheduling.

CERTIFICATIONS

- AI Fluency Certificate & Claude 101** — Anthropic Academy (2026)
- Computer Programming Certificate** — Brigham Young University-Idaho (Jan 2026)

EDUCATION

B.S. in Computer Science — Brigham Young University-Idaho (Rexburg, ID) Expected Graduation: Dec 2026

Relevant Coursework: Database Programming (PL/SQL, PostgreSQL), Machine Learning, Data Structures & Algorithms, Software Design
