

AARON HEINER

Computer Science Student | Software Builder & AI Practitioner

Orem, UT | (208) 960-9883 | aaron.heiner.dev@gmail.com | [linkedin.com/in/aaron-heiner](https://www.linkedin.com/in/aaron-heiner) | github.com/aheiner2001/Practical-Builds

SUMMARY

Computer Science student who builds practical software for people who need it — from machine learning models to internal tools for small teams. Currently building and rolling out an internal operations app for a local business, and recently began contributing to an open-source project. Comfortable using AI, including Claude, as a working tool for building solutions that last.

SKILLS

SQL • Python (Pandas, NumPy, Scikit-learn, Matplotlib) • Data Analysis • Machine Learning • C#, HTML, JavaScript, Bash • Data Cleaning • Database Creation and Management • AI Agents • AI Prompting • Elixir • Unix/Linux command-line tools • Git/GitHub

PROJECTS

TEAM OPERATIONS APP – Wiggy Wash Springville, UT

- Built and deployed an internal scheduling and job-tracking app for a car wash business's team, currently in active daily use.
- Worked directly with non-technical staff to understand real workflow needs and iterated based on day-to-day usage.
- Developing an expanded, multi-location version for a company-wide rollout.

OPEN SOURCE CONTRIBUTION – Ash Framework – On GitHub

- Volunteered over a 10 week period to find and resolve open issues in the ash framework code base

ML REGRESSION NEURAL NETWORK – On GitHub as ‘RegressionNeuralNetwork.ipynb’

- Performed data cleaning and feature engineering (cyclical time encoding, weather features) to improve model prediction accuracy by over 50%.
- Tuned hyperparameters such as hidden layer sizes, activation functions, and learning rates to optimize model performance.
- Tuned hyperparameters including hidden layer size, activation functions, and dropout regularization to improve model generalization.

C# PICKLEBALL TRAINER APPLICATION – On GitHub as ‘PickleballTrainer_C#ConsoleApplication.cs’

- Developed a C# console-based pickleball training application using object-oriented programming, modeling entities such as Player, Game, Drill, and Shot.
- Implemented class hierarchies and inheritance to structure application logic.
- Built an interactive CLI workflow that allows users to create players, log matches, run drills, and view performance statistics.
- Implemented file I/O persistence to save and load player profiles, game history, and training progress between sessions.

CLOUD DATABASE TO-DO LIST APPLICATION – On GitHub as ‘CloudDatabase.md’

- Developed a web-based task management application using Python and Flask with a relational database backend in MySQL.
- Designed the database schema and implemented SQL operations (INSERT, UPDATE, DELETE, SELECT) to manage user tasks and lists.
- Implemented user authentication and session management, enabling secure login and individualized task lists.

PROFESSIONAL EXPERIENCE

OWNER – FreshPane Solutions LLC – Provo, UT | March 2025 – Current

- Founded and operated a window cleaning company generating over \$70,000 in yearly revenue.
- Developed operational procedures that improved service efficiency and customer satisfaction.
- Managed financial operations including budgeting, business expenses, customer payments, and tax preparation.
- Handled scheduling and organizational tasks, efficiently managing appointments and work orders.
- Tracked job performance metrics including completion time relative to window count and price, monitored repeat customer rates, and analyzed trends to optimize pricing and resource allocation.

EDUCATION

B.S. IN COMPUTER SCIENCE – Brigham Young University–Idaho – Rexburg, Idaho

Expected Graduation: December 2026

COMPUTER PROGRAMMING CERTIFICATE – Brigham Young University–Idaho — January 2026

Relevant Coursework: Database Programming, Machine Learning, Patterns and Data Structures
